Step 1: Secure and Plug-in Controller

- 1) Remove existing diagnostic connector located under the right side of the dash into provided diagnostic connector, then plug into provided mini-controller.
- 2) Mount mini-controller near pedals using provided screws.
- 3) Attach provided blue extension wire to bullet connector coming off mini-controller.
- 4) Run blue wire under the dash to the center and route along center console into battery compartment underneath the driver's seat.
- 5) Plug blue 4-inch jumper to end of blue extension wire.
- 6) Plug bullet connector into one coming off relay.

Step 2a: Mount Fuse & Relay, Route Wires

- 1) Mount the fuse and relay to the seat brace as shown using a provided screw.
- 2) Route the wire for the light through the rear of the cab.
- 3) Zip tie as needed.

Step 2: Mount Light

- 1) Mount light as desired.
- 2) Plug in light connector.
- 3) Zip tie as needed.

Note: Be sure to keep wires away from rotating or hot parts at all points of installation.

Step 3: Attach Battery Terminals

- 1) Connect provided red wire with ring terminal to positive terminal on battery.
- 2) Connect provided black wire with ring terminal to negative terminal on battery.

Operation of Reverse Lights

Straightline's Backup Lights are automatic. **NO switches or programming required.** When the vehicle is shifted into reverse, the lights will automatically come on. The controller has been programmed with a manual override feature, so back-up lights can be turned on without the vehicle needing to be shifted into reverse.

• Fully Automatic When Shifted to Reverse

- 1) No programming needed
- 2) Manual Override Function
- 3) Shift the vehicle into Neutral
- 4) Press and hold the brake pedal for up to 2 seconds. The reverse light will automatically turn on and stay on.

***To turn the light off repeat this procedure.**

Note: If the ignition is turned off while the vehicle is in reverse, or the manual override function is enabled, the lights will remain ON until the ECU enters sleep mode (approximately 30 secs to 2 minutes depending on vehicle and ECU type).

Part Number	Description	Quantity	In box
CAN-Def-V4.11	need break down of assembly, est cost	1	
np-209	zip tie, zip tie length 6"	10	
HDS2	screws	1	
CANCA-9	Blue 120" with female connectors on both ends	1	
CANCA-12	Blue 30" extension with relay connector on one end and male bullet on the other	1	
CANBU-68-1	Wire harness with dual light plugs and battery terminals	1	
CANVA-1	Can Am Diagnostics Adapter	1	
AT04-2P	Bagged Female	1	
Light-R6H-1	hardware kit included with 6" light	1	
Light - R6-1	Lights leak, need different vendor	1	
Sticker	2 stickers	2
